# FOREWORD

For too long, the enormous value which kinship carers provide to children, to their communities, and to society has gone without due recognition.

Kinship carers step up out of love to provide a safe and stable home for a relative or friend's child. Whilst their efforts are keenly felt each day by those whose lives they transform, the extent of their collective sacrifice by contrast goes unnoticed.

That's why we're grateful to the expert team at the Centre for Care for working alongside us to publish *Valuing Kinship Care in England*. We hope that illuminating the significant economic contribution provided by kinship carers will

build on growing political and public understanding of the power of kinship care and focus attention on the urgent need to improve support for all kinship families.

For more than two decades, Kinship has provided information and advice and has pioneered evidence-led support programmes for kinship carers of all types across England and Wales. Since 2022, our [#ValueOurLove campaign](#) has led the way in securing more recognition of and support for kinship families than ever before, standing shoulder-to-shoulder with kinship carers who have pushed the government and their local authorities on the changes they want to see.

We do this because, in stepping up to provide a child they love with a safe and stable home, kinship carers make huge personal sacrifices. But unlike foster carers and adoptive parents, most have few rights to financial, practical and emotional support, and taking on the care of a child they love often pushes them into poverty, unemployment and ill health.

In October last year, our evidence and campaigning led to a landmark £40 million investment in the government's 2024 Autumn Budget to [trial a kinship allowance](#) in up to 10 local authorities in England, due to start later in 2025. However, whilst this is a welcome step forward, the pace and scale of reform continues to be too slow.

To truly value the love within kinship families, we need the government to step up – just as kinship carers do every single day – and deliver additional investment in the forthcoming Spending Review to guarantee financial allowances for kinship carers across England.

It makes sense to invest in kinship care. It delivers good long-term outcomes for children,<sup>1</sup> and can help to relieve pressure on overstretched local authority budgets. Previous research commissioned by Kinship has identified that, for every 100 children looked after in well-supported kinship care rather than local authority care, the state saves £4 million per year and increases the lifetime earnings of those children by £2 million.<sup>2</sup> The Independent Review

2 Nicol Economics for Grandparents Plus (2020) [Kinship Care: The Opportunity](#)

of Children's Social Care recommended in 2022 that extending financial allowances to kinship carers would deliver savings for the public purse after only 3 years.<sup>3</sup>

We must not – and cannot – do nothing. Our most recent annual survey found that 13% of kinship carers were concerned about their ability to continue caring for their kinship children in the next year if their situations didn't improve.<sup>4</sup> There is a real and urgent risk associated with maintaining the status quo.

We urge the government to embrace the unique opportunity ahead of them to change the futures for thousands of children and generate significant cost savings in a difficult climate. It's time to recognise the immense economic contribution which kinship carers make and invest in what we know works. It's time to value their love.

# INTRODUCTION

Across the country, thousands of grandparents, aunts and uncles, other family members or friends provide a home for children and young people whose parents are no longer able to do so.<sup>5</sup> This often occurs due to circumstances such as parental death, illness, imprisonment or substance abuse, or where children have experienced neglect or abuse. As kinship carers, family members and friends seek to offer a safe and stable environment, rooted in love, belonging, and familial identity, to children and young people who have experienced significant early life adversity, loss, trauma, or neglect.

Kinship care is an important but often invisible pillar of the children's social care system. For context, out of the 12 million children living in England, just under 400,000 (3%) are in the social care system (i.e. known to children's social services) at any one time.<sup>6</sup> In 2021, when the Census data was gathered, more than 80,000 of these children were in care (known as 'looked after children'). This included over 57,000 children living in foster care<sup>7</sup> and almost 12,000 children living in residential care<sup>8</sup> in England. However, a previous estimate by the Office for National Statistics (ONS)<sup>9</sup> suggests that there are more than twice the number of children living in kinship care (over 121,000) as there are in foster care - demonstrating the scale of the contribution made by kinship families in avoiding these children from entering state care.

Kinship families are more likely to live in the most deprived areas and to experience deprivation in terms of employment, education, housing and disability.<sup>10</sup> Unlike children in foster families, most kinship families receive little or no financial, practical or emotional support, pushing many to breaking point.<sup>11</sup> Kinship's most recent annual survey found that kinship carers were more than twice as likely to be using food banks than other UK adults and more than four times as likely to have had a bill they weren't able to pay in the last month.<sup>12</sup>

Kinship's [#ValueOurLove campaign](#) calls on the UK government to equalise support between kinship families and foster and adoptive families. In support of this campaign, in this report we highlight the substantial economic value provided by kinship carers in England. We calculate this economic value through a novel analysis, using Census 2021 data to create a robust estimate of the number of kinship carers in England, and combining this with specific local authority costs of alternative forms of care - as detailed fully in Appendix A. Of course, the true value of kinship care to those who experience it is impossible to quantify; nonetheless, efforts to estimate the economic value serve as a compelling way to highlight the profound—and, to date, largely invisible and overlooked—contributions of kinship carers to society.

## A glossary of children's social care arrangements in England

- **Kinship care:** 'Kinship care' is an umbrella term for anyone who looks after the child of a family member or friend. Other terms used include 'family and friends' care and 'connected carers'. There are several types of kinship care arrangements, and people's situations may change over time. Kinship carers' rights, responsibilities and the financial and other types of support they can access will depend on their specific circumstances. Types of kinship care include informal kinship care, kinship foster care, private foster care, special guardianship, child arrangements orders, and Testamentary Guardianship. The majority of kinship carers are informal, meaning that they do not have a legal arrangement in place.
- **Foster care:** Foster carers look after children when their birth parents are not able to, either on a long term basis until they are an adult, or short term for a few weeks or months while plans are being made for their future.<sup>13</sup> This may be for a variety of reasons. Foster carers are eligible for publicly funded support, including a foster care allowance to cover the cost of caring for a child.
- **Residential care:** Residential care refers to group care for looked after children, in a facility where care is provided by teams of paid staff.<sup>14</sup> It includes children's homes, secure children's homes, residential special schools and short break homes. This may be arranged under a care order or a voluntary accommodation arrangement. Residential care is an alternative to foster care or kinship care, which are more common placements for children who cannot live with their birth family. Compared with their peers in foster care, children are more likely to be older and male, and to have experienced multiple previous placements which have broken down. They tend to have experienced greater adversity and have more complex needs.<sup>15</sup>

# FINDINGS

In this report, we define 'economic value' as the monetary equivalent of the contributions made by kinship carers, reflecting the level of support they provide in caring for children who cannot live with their birth parents. In this section, we calculate this economic value in two stages: first, we estimate the number of kinship carers in England in 2021; we then assign a value to the care provided to each child based on the average weekly costs of foster care placement in their local authority, which are combined to estimate the overall economic contribution of kinship carers.

## How many children live in kinship care in England?

There is no definitive estimate of the number of children growing up in kinship care in England, and – as highlighted below – much more needs to be done to improve the collection of data on kinship families, so that we can better understand this population and their needs. Currently, our best estimate relies on Census 2021 data, which has some limitations.

The ONS identifies kinship care arrangements in the Census data when a child was reported as living in the household but not as a son or daughter of other adult household members. For instance, the child might be reported as a grandchild, niece, nephew or other relative of the adults in the household.

More specifically, the ONS defines children living in kinship care as:

*'people aged 17 years and under on Census Day who lived in households without a parent present, but with adults aged 18 years and over who were their sibling(s), grandparent(s), or other relatives, such as their aunt(s), uncle(s), or cousin(s).'*<sup>16</sup>

The ONS finds that 1.1% of children (aged 0–17 years)<sup>17</sup> living in households of five people or fewer were in kinship care – this is a total of 113,695 children in England.

While invaluable, the Census 2021 data on kinship care is subject to several significant limitations:

- The ONS excludes children living with adults who are unrelated to them, such as those in the care of family friends. This is not because the ONS dispute that family friends play an important role as kinship carers, but simply because it is too difficult to identify them in the Census data. In this report, we are not able to provide an estimate of the number of unrelated kinship carers, but we do acknowledge the importance of their contribution.
- The Census does not fully document the relationships between members of households with six or more people – leaving a gap in the kinship data for these larger households. In this report, we have calculated our own estimate for the number of kinship families in larger households (described more fully in Appendix A).

16 ONS (2023) [Kinship care in England and Wales: Census 2021](#)

17 ONS (2023) [Kinship care in England and Wales: Census 2021](#)

As a result, the Census 2021 data fails to capture the real number of children living in kinship care, particularly in communities where multigenerational or extended family living arrangements are common. These limitations demonstrate the need for the UK government to invest in improved methodologies and supplementary data collection in order to provide a more accurate and comprehensive understanding of the full range and diversity of kinship care arrangements.

We use Census data from 2021 to estimate the number of children living in kinship care in England (See Appendix A.1 for more details).

In our analysis:

- We do not include estimates for children living with non-relatives (e.g., family friends), due to the lack of reliable data, acknowledging that this exclusion likely underestimates the total contribution of kinship care.
- To address the lack of data on larger households (six or more members), we provide our own estimation of the number of children living in kinship care within these households. This is done by assuming that the proportion of children in kinship care observed in smaller households also applies to larger households.<sup>18</sup> (for more detail please see Appendix A.1).

**We estimate that the total number of children living in kinship care arrangements in England is 132,818.**

# 132,818

**Children living in kinship care arrangements in England.**

**This is over twice the number of children living in foster care.**

## How much would alternative care cost?

If these children were not looked after by their kinship family, they would require alternative forms of care, most commonly foster care, as they cannot live with their birth parents. Both kinship and foster care are forms of family-based care, offering a nurturing environment within a household setting.<sup>19, 20</sup> Residential care is typically for children and young people who would not thrive in a foster family environment and would benefit from intensive

<sup>18</sup> ONS (2023) [Kinship care in England and Wales: Census 2021](#)

<sup>19</sup> Department for Education (2024) [Kinship Care: Statutory Guidance for local authorities](#)

<sup>20</sup> Winokur, M. A., Holtan, A., & Batchelder, K. E. (2018) [Systematic Review of Kinship Care Effects on Safety, Permanency, and Well-Being Outcomes](#). Research on Social Work Practice, 28(1), 19-32.

therapeutic support.<sup>21, 22</sup> Arguably, a child who needs residential care is unlikely to be in kinship care arrangements, making foster care the most appropriate and realistic alternative considered in this report.

For this reason, we estimate the economic value of kinship carers by using the weekly cost of foster care as a proxy for the cost of care kinship carers provide. The cost of foster care (measured by the Department for Education) includes foster carer allowances, training for foster carers, ongoing support services, administrative expenses, and the costs of social workers and other staff supporting foster families.<sup>23</sup>

**We estimate that, in England, the total value of kinship care is:<sup>24</sup>**

**£4.3 billion per year**

**£360 million per month**

**£83 million per week**

**£0.5 million per hour**

21 Holmes, L. (2021) [Reimagining residential children's homes: Residential care for adolescents. Right place, right time?](#) Research in Practice evidence review.

22 Holmes, L., Connolly, C., Mortimer, E., & Hevesi, R. (2018) [Residential Group Care as a Last Resort: Challenging the Rhetoric.](#) Residential Treatment For Children & Youth, 35(3), 209–224.

23 Unit cost by local authority obtained from Department for Education, Children's Services Finance data. [Local authority interactive tool](#)

24 For more details on the calculation please refer to [Appendix A, Table A.1](#).

This is equivalent to 38% of the entire children's services budget for England, which was reported to be £11.1bn for 2020/21.<sup>25</sup>

**Note on the cost of alternative care:** we have adopted a simple and conservative approach based on using foster care as the most likely form of alternative care provided by the state.

In reality, given the high number of children in kinship care, it would not be feasible for all children currently in kinship care to be placed in foster care, and a proportion of children might therefore otherwise be living in residential care, which is significantly more expensive than foster care. This issue is exacerbated by a crisis in recruitment and retention of foster carers. Since 2019, the number of fostering households in England decreased by 1,045, while the number of children in care has increased by 5,690.<sup>26</sup>

To take this possibility into consideration we have included a second estimate of the value of kinship care using both foster and residential care as replacement cost based on the current proportions of each form of care in each local authority (please refer to Table B.1). This replacement cost is notably higher than the headline figure presented in the main report.

<sup>26</sup> The Fostering Network (2024) [More children to end up in unsuitable homes if more foster carers aren't urgently recruited.](#)

# CONCLUSION and RECOMMENDATIONS

The analysis presented in this report provides further evidence of the major contribution to society that is made by kinship carers. The scale of this contribution is significant, with over 132,000 children living in kinship care arrangements in England in 2021 - considerably more than twice the number of children in foster care at that time. Our novel analysis places an economic value on this care of £4.3bn a year - equivalent to well over a third of the entire national children's services budget for England.

If this care was no longer provided, our child protection and welfare systems would simply not be able to cope. This is not just because of the amount of money that would be required to provide alternative care, but more so due to the system's lack of capacity to respond. It is highly unlikely our systems would be able to find the mainstream foster care or residential care placements for this number of children.

Kinship care is provided from a basis of love, duty and compassion, embodying an unyielding commitment to the children they care for. However, this love and duty should not be taken for granted, nor seen as a cheap option. Instead, we must recognise the value of kinship care as equivalent to foster care, and support kinship carers accordingly. Only by doing so can we maintain the wellbeing of the kinship carers we rely so heavily upon, and ensure the best possible outcomes for the children and young people they care for.

The risk of inaction is significant. In Kinship's most recent annual survey, 13% of kinship carers said they were concerned about their ability to continue caring for their children in the next year if their situations didn't improve. This would come with devastating consequences for children, families and the state. It's welcome that governments and local authorities are recognising the importance of kinship care within the children's social care system, but much more needs to be done to ensure that all kinship families get the financial, practical and emotional support they need and deserve.

Kinship's #ValueOurLove campaign calls on the UK government to equalise support between kinship families and foster families, arguing that the support needed for kinship families to thrive includes:

- **Investment in financial support for kinship carers**
- **Robust data collection which helps us understand people's needs**

Our analysis supports these claims. In particular, we make the following **recommendations**:

**1) Investment in financial support for kinship carers - recognising their role as equivalent to foster care**

- The government should accelerate its plans to deliver a trial of a kinship allowance in up to ten local authorities and take further steps to improve the financial support provided to kinship families across England. All kinship carers should receive a financial allowance at least matching the minimum fostering allowance to help cover the costs of raising a child, and the government's forthcoming multi-year Spending Review should allocate the necessary funding to enable this.
- In the interim, local authorities should follow the example of those who already provide non-means-tested allowances to some kinship carers.<sup>27</sup> This would help ensure financial barriers do not hinder families from pursuing the kinship arrangements best suited to their situation and reduce risks to permanence or family breakdown.

**2) Robust data collection to understand the population and needs of kinship carers**

- The government must ensure robust, accurate data is collected on kinship families, similar to the data available for other areas of children's social care, such as fostering and adoption.
- Existing data sources across government departments should be utilised in the interim to improve our understanding of kinship families. For example, the Department for Education's School Census should include a marker identifying all forms of kinship children, enabling better policymaking and service delivery.

For additional and regularly-updated information on kinship care policy in England, including current activity, our verdict and what should happen next, please visit Kinship's online [kinship care policy tracker](#).

# APPENDIX A: DETAILED METHODOLOGY

## 1) Data sources

### i) Census 2021 (ONS) - numbers of children living in kinship care

The Census 2021 asks detailed questions about the relationships between household members, such as whether they are parents, children, siblings, or other relatives. Respondents indicate the nature of their relationship to the household reference person (the individual completing the form on behalf of the household).

Kinship care arrangements are identified when a child who was 17 years and under was reported as living in the household but not as a son or daughter of another adult household member. For example, a child listed as a grandchild, niece / nephew, or other relative under the care of adults who are not their parents is flagged as being in a kinship care arrangement.

The relationships between household members were fully documented only for households with up to five members. Therefore, children in kinship care are counted exclusively in households of this size or smaller. We have therefore included our own estimate of the number of children in kinship care in households with six or more members.

### ii) Department for Education (DfE), Children's Services Finance data - unit cost of foster care (financial year 2020/21)

The Department for Education collects and publishes detailed financial data on children's services, including the costs associated with foster care. In this report, we use the weekly unit cost of foster care identified in the Department for Education 'Children's Services Finance' data.<sup>28</sup>

Weekly unit costs represent the average expenditure incurred per child in foster care per week for each local authority. These costs encompass various elements such as fostering allowances, administrative expenses, support services, and training for foster carers. In particular, unit costs include all in-house provision, fostering services purchased externally, fees and allowances paid to foster carers and the costs of social worker and other support staff who support foster carers. This includes: mainstay placements, link placements, permanence placements, temporary /respite fostering, and associated independent visitor costs and relevant contact payments under sections 20/34 of the Children Act 1989.

To determine the weekly unit cost, the total annual expenditure on foster care is divided by the number of child-weeks of care provided during the year. This calculation yields an average cost per child per week, offering insights into the financial resources allocated to foster care services.

---

<sup>28</sup> Department of Education (2023). [Local authority interactive tool](#) (Children's Service Finance). In the dashboard, set the "content" to "All LA content" and set the "topic" to "Children's Service Finance". The unit cost of foster care can be selected from the indicators drop down menu.

## 2) Methodology

We measure the value of kinship care by adopting a **replacement cost approach**. This involves estimating the likely cost to the state of replacing kinship care with an alternative – using the unit cost of foster care as a proxy for the unit cost of kinship care.

Our analysis took the following steps:

### 1) We used Census 2021 data to estimate the number of children living in kinship care in each local authority in England.

The Census excludes households of six or more people (due to incomplete information about the relationships between household members). Therefore, we estimate the number of children living in kinship care in larger households as follows:

- a) We calculated the proportion of children in kinship care living in households of five or fewer people. This involves dividing the number of children in kinship care in households of five or fewer people by the total number of children in such households<sup>29</sup>. This gives us the “rate” of kinship care in smaller households. We calculated the rate for each local authority.
- b) We calculated the proportion of children in kinship care living in larger households (6 people or more). We assume that the proportion of children in kinship care in smaller households also applies to larger households.<sup>30</sup> We use the total number of children living in larger households and multiply the proportion calculated in the previous step. We do this for each local authority.
- c) We combined the totals - adding the number of children in kinship care in larger households, to the number already reported for households with five or fewer people. This gives us a total estimate of children in kinship care across all household sizes in each local authority.

For more details on the aforementioned calculations, please see Table A.1.

### 2) We estimated the unit cost of placing children in replacement care instead of kinship care for each local authority.

The weekly unit costs for foster care were obtained from the 'Children's Service Finance' data provided by the Department for Education. The average unit cost is £615 per week in England in 2020/21 and the cost varies by local authorities, ranging from £120 and £1,190. We used the bespoke cost for each local authority in our estimation.

### 3) We calculated the economic value of kinship care in each local authority by multiplying the number of children in kinship care by the unit cost of replacement care for the respective local authority.

For each local authority, we multiplied the number of children who would otherwise have been living in foster care (the overall number of children living in kinship care as per Census 2021 data) by the weekly unit cost of foster care.

<sup>29</sup> Data on the number of children by household size available at <https://www.ons.gov.uk/datasets/RM057/editions/2021/versions/3/filter-outputs/f42dd74d-96b5-4ea8-bb27-8b194d599614#get-data>

<sup>30</sup> The assumption about the proportion of children in kinship care living in larger households is also adopted by ONS publications. See Office for National Statistics (ONS) (2023) [Kinship care in England and Wales: Census 2021](#).

## Assumptions and limitations

- **Lower tier and upper tier local authorities** – the ONS estimates the number of children in kinship care at the geographical level of 'lower-tier' local authorities (district councils). However, the Department for Education uses 'upper-tier' local authorities (county councils) for sub-regional data. Therefore, before the final multiplication, we derived the number of children in kinship care at the upper-tier level by adding the numbers from the corresponding lower-tier local authorities.
- **Children in kinship foster care** – at 31 March 2021, approximately 12,400 children were living in kinship foster care arrangements with a relative or friend; these children are looked after by the local authority. Their kinship carers are known as kinship (or family and friends) foster carers and they are entitled to receive a foster care allowance and other support. Our aim is to quantify the total economic contribution of all kinship carers in all types of arrangement, and given the absence of robust data on the proportion of children in kinship foster care within the wider cohort of kinship children identified through the Census 2021, our analysis therefore does not exclude children in kinship foster care when considering replacement cost. Our analysis also does not consider where other kinship carers may receive some financial or other support paid for by the local authority; this is highly variable and dependent largely on the type of arrangement and the child's journey into kinship care.<sup>31</sup>
- **Kinship carers who are unrelated ('friends')** – a small proportion of kinship carers are not related to the child they care for. We have only been able to include kinship carers who are family relations in our analysis, as currently the estimates of unrelated kinship carers are not reliable enough, since these relationships are too difficult to identify in the Census data. This limitation will lead to an underestimate of the population, and therefore the total economic value.
- **Alternative care** – we have taken a simple and conservative approach to estimating the cost of alternative care, by looking at the unit cost of foster care as the most likely alternative form of care provided by the state. In England, the majority of children who are removed from their birth parents are placed in foster care (approximately two thirds). However, some are placed in residential care (including children's homes, secure homes, special schools and others). We could therefore assume that if there were no kinship carers, then a proportion of children might also enter some form of residential care. Since residential care tends to be much more expensive than foster care, this would lead to significantly higher costs. In Appendix B we have estimated the cost of this based on an assumption about the likely proportions in each form of alternative care, but for the headline figures of this report we have focused on foster care alone as an alternative. In reality, there is a shortage of foster carers and growing concerns about their recruitment and retention.<sup>32</sup> In the current system, it is highly unlikely that enough foster carers could be recruited to replace kinship carers should they be unavailable. This could mean that even more children enter residential care. We have not made any assumptions about this scenario, since it would be too speculative - but we believe it is imperative for decision makers to consider, given the extreme pressures that many kinship carers are under.<sup>33</sup>

**Note:** Authors' calculations based on Census 2021. Columns 1 and 2 report the number of children in smaller (five people or fewer) and larger (six people or more) households, respectively, based on Census 2021 data<sup>34</sup>. Column 3 shows the number of children in kinship care in small households according to Census 2021. Column 4 presents the percentage of children in kinship care living in small households, calculated as the ratio between the number of children in kinship care (Column 3) and the total number of children in small households (Column 1). Column 5 applies this percentage to the number of children in larger households (Column 2) to estimate the number of children in kinship care living in larger households. Finally, Column 6 reports the total number of children in kinship care across both small and large households. Column 7 reports the annual value of kinship care. These figures are based on raw values, which reflect differences in population size, demographics, and local authority (LA) practices rather than standardised measures. Variation in LA practice can arise from differences in local policies, resource allocation, and population needs. For a detailed exploration of such variation, refer to a recent report by Foundations.<sup>35</sup>

35 Foundations (2023) [Understanding the variation in support for kinship carers: a survey of local authorities in England](#).

# APPENDIX B: ANALYSIS INCLUDING RESIDENTIAL CARE

In this section, we present an alternative method for calculating the value of kinship care by accounting for the possibility that some children might be placed in residential care. This approach involves the following steps:

## 1) We used Census 2021 data to estimate the number of children living in kinship care in each local authority in England.

The Census excludes households of six or more people (due to incomplete information about the relationships between household members). Therefore, we estimate the number of children living in kinship care in larger households as follows:

- a) **We calculated the proportion of children in kinship care living in households of five or fewer people.** This involves dividing the number of children in kinship care in households of five or fewer people by the total number of children in such households. This gives us the 'rate' of kinship care in smaller households. We calculated the rate for each local authority.
- b) **We calculated the proportion of children in kinship care living in larger households (6 people or more).** We assume that the proportion of children in kinship care in smaller households also applies to larger households. We use the total number of children living in larger households and multiply the proportion calculated in the previous step. We do this for each local authority.
- c) **We combined the totals** - adding the number of children in kinship care in larger households, to the number already reported for households with five or fewer people. This gives us a total estimate of children in kinship care across all household sizes in each local authority.

## 2) We estimated what proportion of children would likely be placed in either foster or residential care in each local authority, if there was no kinship care or other placement options available.

- a) This calculation used the actual number of children in foster and residential care<sup>2</sup> in 2021 for each local authority, based on the 'Children Looked After in England Including Adoptions' data from the Department for Education.
- b) We added the number of children in both foster and residential care in each local authority. In each local authority, we assume that children currently in kinship care would enter foster and residential care at the same rates as they currently do. To calculate the proportion of children in foster care, we divided the number of children in foster care by the total number of children in both foster and residential care. We applied the same method for residential care by dividing the number of children in residential care by the total number of children in both categories. This gave us the percentage breakdown for each type of state care.

**3) We estimated the unit cost of placing children in replacement care instead of kinship care for each local authority.**

- a) This estimate used the weighted average of the weekly unit costs for foster care and residential care in 2021. The weights were based on the proportions calculated in the previous step.
- b) The weekly unit costs for foster and residential care were obtained from the 'Children's Service Finance' data provided by the Department for Education.<sup>36</sup>

**4) We calculated the economic value of kinship care in each local authority by multiplying the number of children in kinship care by the unit cost of replacement care for the respective local authority.**

- a) For each local authority, we multiplied the proportion of children who would otherwise have been living in residential care - if kinship care had not been available - by the unit cost of residential care. Similarly, we multiplied the proportion of children who would otherwise have been placed in foster care by the unit cost of foster care. We then added these two values to obtain the total economic value of kinship care.

## Addressing missing values in the dataset (data imputation)

It is important to note that some data from the Department for Education used in this section required imputation. Data imputation is a process used to fill in the missing values in a dataset. This involves trying to estimate or replace this missing data with reasonable values so that the dataset is complete for the analysis. This ensures that the missing data does not affect the accuracy or results of the analysis.

There are two reasons why some data is missing in our datasets:

- 1) **Not applicable:** this means that a particular data point doesn't apply to the situation. In this scenario we cannot do any data imputation and have no way to fill in the gap. For example, it might mean that this local authority does not have any children in residential care.
- 2) **Protecting confidentiality:** to protect confidentiality, data from the Department for Education were suppressed (not made publicly available) if the number of children in a particular category was less than five. This can happen in local authorities with small populations (e.g. the City of London). Consequently, the information regarding the number of children living in residential care in 2021 is missing for some local authorities.

The process of imputing the missing local authority-level figures for a specific region is as follows:

- 1) Regional-level and national-level totals were released by the Department for Education (rounded to the nearest 10), which provides additional information to facilitate the imputation process. We subtracted the sum of the non-missing local authority figures from the regional total to obtain the combined total of the missing figures.
- 2) We divided this combined total by the number of missing local authorities, assuming uniform distribution within the region. We rounded down these regional averages to the nearest integer.

<sup>36</sup> Department for Education (2023), Children's Services Finance data. [Local authority interactive tool](#)

3) We used these rounded figures to impute the missing values for each local authority.

This only affects a very small proportion of local authorities in England<sup>37</sup>.

### Geographical inconsistencies

It should be noted that the geographical level used by the ONS to estimate the number of children in kinship care is the 'lower-tier' local authorities. However, the Department for Education uses 'upper-tier' local authorities for sub-regional data. Therefore, before the final multiplication, we derived the number of children in kinship care at the upper-tier level by adding the numbers from the corresponding lower-tier local authorities.

### Findings

Table B.1 presents the number of children in kinship care according to the 2021 Census, adjusted by children in larger households. It also provides the number of children in foster care and residential care based on Department for Education 2021 data, along with the corresponding proportions of children in each type of care, as calculated by the authors. Table B.2 presents the weekly unit costs of residential and foster care. It estimates the potential costs of residential and foster care based on the proportion of children who would likely be placed in either type of care within each local authority, assuming no kinship care or alternative placement options were available. Finally it reports the value of kinship care as the sum of these two values to obtain the total economic value of kinship care.

---

<sup>37</sup> Residential care has two components: (1) The majority consists of "secure units, children's homes and semi-independent living accommodation" with only one local authority imputed (0.6%). (2) A small proportion of children are in residential schools. However, since the overall number is very low (only 120 children in the entire country), 51.3% of LA were imputed.

**Note:** Authors' calculations based on Census 2021 and Department for Education - Children's Services Finance data. For more details on the number of children in kinship care in small and large households please refer to Appendix A - Table A.1. These figures are based on raw values, which reflect differences in population size, demographics, and local authority practices rather than standardised measures. Variation in local authority practice can arise from differences in local policies, resource allocation, and population needs. For a detailed exploration of such variation, refer to a recent report by Foundations.<sup>38</sup>

## CENTRE FOR CARE

The Centre for Care is a research-focused collaboration between the Universities of Sheffield, Birmingham, Kent, Oxford and the London School of Hygiene and Tropical Medicine, the Office for National Statistics, Carers UK, the National Children's Bureau, and the Social Care Institute for Excellence. The Centre for Care is funded by the Economic and Social Research Council (ESRC, award ES/W002302/1), with contributions from the Department of Health and Social Care's National Institute for Health and Care Research (NIHR) and partner universities. The views expressed here are those of the authors and are not necessarily those of the ESRC, UKRI, NHS or NIHR.

Led at the University of Sheffield by Centre Director Professor Kate Hamblin and Deputy Director Professor Nathan Hughes, our work aims to make a positive difference in how care is experienced and provided in the UK and internationally by producing new evidence and thinking for policymakers, care sector organisations and people who need or provide care.

The Centre works with care sector partners and leading international teams to provide accessible and up-to-date evidence on care – the support needed by people of all ages who need assistance to manage everyday life.

In studying care, we focus on ways of improving wellbeing outcomes and on the networks, communities and systems that support and affect people's daily lives, working closely with external partners.

## KINSHIP

Kinship is the leading kinship care charity in England and Wales. We're here for kinship carers – friends or family who step up to raise a child when their parents aren't able to.

We are made by and for our community of kinship carers. Like family, relationships run deep. And we hear their experiences; for too long they have been isolated without the help they need.

We support, advise and inform kinship carers. Connecting them so they feel empowered.

Because a child needs the love and warmth of a thriving family.

We develop research, campaigns and policy solutions. Creating positive change across society.

Because for kinship families, love alone is not enough.

Through our work we harness frustrations to fuel passion for change. And tough experiences to inspire ideas that transform lives.

And as we see momentum building, we keep using evidence to demonstrate the value of kinship care. Helping kinship carers navigate challenging circumstances. Believing in a child's potential.

Join us. Together, let's commit to change for kinship families.
